Sample Java Programming Exercise and Its Answer

To illustrate how to approach Java exercises and their answers, here is a simple example:

Exercise:

Write a Java program to check if a number is prime.

Sample Answer:

```
```java

public class PrimeChecker {

 public static void main(String[] args) {

 int number = 29; // You can change this value for testing

 boolean isPrime = true;

 if (number
 System.out.println(number + " is not a prime number.");

 return;

 }

 for (int i = 2; i
 if (number % i == 0) {

 isPrime = false;

 break;

 }

 }

 if (isPrime) {

 System.out.println(number + " is a prime number.");

 } else {
```

```
System.out.println(number + " is not a prime number.");

}

}

}

...
```

This solution efficiently checks for primality by testing divisors only up to the square root of the number, demonstrating best practices in algorithm design.
